 Name: _____

Find the Matching Mitten

Count the dots on each mitten. Find the mitten with that number and draw a line from the black dot to its dot.

For grown-ups: why it works. Matching a group of dots to its written number connects quantity (how many) with the symbol (the numeral), the bridge children must cross before adding. Dots sit in rows of three, so children can see 6 as two rows and 9 as three rows instead of counting one by one. Answers: 6-6, 3-3, 9-9, 4-4, 7-7.
